

# SKIDFLEET

Forklift operators perform at higher utilization factor level when they know performance status is visually shown to them in real time and is being recorded. The automatic **\*true operational idling times** trend reports will show when key KPI variable is outside the target range for each operator. Automated e-mail notifications, LAN web page allow immediate response to actual operational status for each operator that can be addressed, identify and corrective action can be taken.

*\* Patented Technology, KPI automatic utilization factor*

Fully Automatic  
Forklift Operator  
Performance Monitoring In  
Real-Time
